

LifeSize System Architecture

Life Insurance Needs Analyzer · codeLinc 11 · Team minilikz2nd

The assistant talks.
Tested code calculates.
The assistant explains.

REQUEST FLOW

1 App sends the message over HTTPS with a JWT. 2 Nova Lite checks it is on topic. 3 Nova Pro runs the Converse tool loop inside the Guardrail. 4 Every number comes from the MCP calculator (DIME method). 5 Answers and results are saved, then returned to the app.

FOUR GUARDRAIL LAYERS

① Input scope check ② Scope-first system prompt ③ Managed Bedrock Guardrail (investment advice, prompt attacks, PII) ④ Output check rejects any \$ not from the calculator Fallback: scripted interview + in-process calculator if Bedrock or MCP is down.
